

Harish G

Full Stack & AI Engineer — Multi-Stack (Java, Python, JS)

Bengaluru, India — +91 7892855850 — harish00506@gmail.com

LinkedIn — GitHub

Profile

Final-year Information Science Engineering student with over a year of hands-on experience across freelance projects and an AI engineering internship, with expertise spanning the Java, Python, and JavaScript ecosystems. Experienced in building scalable backend systems using Spring Boot, Express.js, and FastAPI, and integrating AI technologies such as LLMs, STT, TTS, and agent-based workflows into real-world applications. Passionate about developing intelligent, automation-driven systems and seeking roles in AI engineering, backend, or full-stack development.

Core Strengths

Languages: Java, Python, JavaScript, TypeScript, Kotlin, SQL

Backend: Spring Boot, Express.js, Node.js, FastAPI

Frontend: React, Vite, NextUI, Jetpack Compose

Databases: PostgreSQL, MongoDB, Firebase, Neo4j

AI/ML: LLM Integration, RAG, Context Management, Agents, Workflow Automation, STT/TTS Systems

Tools: Git, GitLab (Version Control & Release Management), Docker, Postman, Android Studio, Figma

Concepts: OOP, REST API Design, JWT Authentication, MVC Architecture, Multithreading, Query Optimization, Modular System Design, Resource Management, Basic UI/UX Design Principles, System Design Fundamentals

Experience

Software Developer — CortexCraft.ai

May 2026 – Present

- Developing AI-driven solutions integrating LLMs, STT, and TTS into real-world applications.
- Building agent-based systems and workflows for automation and intelligent task execution.
- Applying context management, RAG pipelines, and modular AI architectures for scalable solutions.
- Contributing to projects involving mathematical models and AI-assisted decision systems.
- Integrating AI into daily development workflows to improve efficiency and product intelligence.

Software Developer Intern — CortexCraft.ai

Jan 2026 – May 2026

- Built and integrated AI features (LLM, STT, TTS) into core company applications.
- Developed agent-based automation workflows and RAG pipelines; converted to a full-time role.

Freelance Web & App Developer (Self-Employed)

2023 – 2026

- Built responsive landing pages and small business websites for local clients using React and Vite.
- Delivered small full-stack apps and automation scripts (Python / Node.js) tailored to client workflows.
- Handled ad-hoc bug fixes, feature additions, and deployment support on a per-project freelance basis.

Projects

Zentrax — AI-Powered Voice & Gesture Desktop Assistant *Python, Whisper, MediaPipe, Web-Socket, Ollama, HTML/CSS/JS*

- Built a Windows AI assistant inspired by FRIDAY enabling voice commands and gesture-based control.
- Integrated Whisper (STT), LLM-based intent recognition (Ollama), and a modular execution engine.
- Designed fallback recognition pipelines ensuring robust and reliable automation.
- Developed a real-time monitoring dashboard with WebSockets for system metrics and command tracking.

- Enabled local LLM deployment with Docker for privacy-focused AI execution.

Task Tracker — Full-Stack Productivity App *Java (Spring Boot), Vite, TypeScript, PostgreSQL*

- Built REST APIs using Spring Boot with clean architecture and DTO-based design.
- Reduced API latency by 30% through query optimization and efficient data handling.
- Implemented task prioritization, tracking, and persistent storage.

GroceryGo — Android Grocery App *Kotlin, Jetpack Compose, Firebase*

- Achieved 0% crash rate across 5+ Android OS versions.
- Implemented offline caching and auto-sync for 100+ stored items.

Education

B.E. — Information Science and Engineering

Vivekananda Institute of Technology, Bangalore

Achievements

- Built and deployed AI-powered and full-stack applications with real-user testing.
- Strong experience in backend optimization, debugging, and scalable system design.
- Applied structured development lifecycle with Git-based collaboration.
