Harish G

Backend & Platform Engineer | APIs, Async Workers, Observability, CI/CD

Bengaluru, India | +91 7892855850 | harishgreddy.work@gmail.com | LinkedIn | GitHub | harishg.com

Profile

The interesting part of a service is the week after it ships. In that week I have traced a Docker TLS failure to NAT hairpinning on a self-hosted domain, added reconnect handling for sockets that drop mid-call, and worked out why outbound routing was picking the wrong carrier. So now I build the operations in from the start. A request ID through every log line, metrics on a port, and the rollback written down before anyone needs it.

Core Skills

Languages	Python · Java 21 · JavaScript · TypeScript · SQL
Backend	FastAPI · Spring Boot 3.5 · Node.js/Express · Celery · WebSockets · REST API Design · Multi-Tenant SaaS
Data	PostgreSQL · Alembic · Flyway · MongoDB · Redis · Neo4j · Query Optimization
Platform	Docker & Compose · Jenkins · GitLab CI · GitHub Actions · Git · Twilio · Plivo
Ops	Structured JSON Logging · Request-ID Propagation · Prometheus Metrics · Health Endpoints · Runbooks & Rollback · Append-Only Audit Logs
Concepts	System Design · Modular Architecture · JWT Auth & RBAC · Idempotency & Locking · Zero-Downtime Migration

Experience

Software Developer, CortexCraft.ai Jan 2026 – Present

- Built and maintain the voice-agent platform (589 of 626 commits on the SaaS platform, 67 of 75 on the core engine), including the external REST API that other products integrate against, so one platform backs several shipped products instead of several codebases.
- Own production reliability of the call pipeline: fixed outbound routing, added reconnect handling for dropped sockets, tightened termination detection so calls end cleanly, and traced a Docker TLS failure to NAT hairpinning on a self-hosted domain.
- Shipped LeadCall AI on the platform: Celery dial and callback workers behind Redis dial locks, per-tenant telephony credentials encrypted at rest, Alembic-migrated PostgreSQL, and an append-only audit log of operator actions.
- Gate merges on GitLab CI with 132 pytest files, on feature branches with conventional commits.

Freelance Web & App Developer (Self-Employed) 2023 – 2026

- Delivered backend services, automation scripts and deployment support for local clients in Python and Node.js.

Selected Projects

KisanVoice AI, multilingual survey platform *Python, FastAPI, MongoDB, Jenkins, Docker*

- 172 of 192 commits. Operations built in rather than added later: every request carries an `X-Request-ID` that is forwarded or generated and echoed back, every log line is a single JSON object carrying that ID, and each response is logged with its status and duration in milliseconds. A Prometheus instrumentator exposes `/metrics` with status codes grouped and health endpoints excluded.
- Ships with a deployment runbook covering prerequisites, environment setup, a verification step and a symptom-to-fix section for the failures the team actually hit, alongside a written release process with a hotfix flow and a rollback procedure.
- Replaced the Node.js backend with FastAPI and swapped the speech provider behind a config-driven registry of 24 locales, both without interrupting live surveys. Jenkins builds it, Docker Compose runs it.

Lendly, lending platform backend *Java 21, Spring Boot 3.5, PostgreSQL, Flyway, Docker*

- Spring Boot 3.5 on Java 21 with Spring Security and JJWT, Data JPA and Bean Validation, Flyway versioned migrations against PostgreSQL with H2 for tests, GitHub Actions CI and Docker Compose for local environments.

FinGraph AI *Node.js, Express, Neo4j, Supabase pgvector, JWT*

- Two stores behind one query path: pgvector for similarity search and Neo4j for the relationships each hit is enriched with, under JWT authentication with bcrypt-hashed credentials and role-restricted admin routes.

Education & Ways of Working

B.E., Information Science and Engineering, Vivekananda Institute of Technology, Bangalore

Feature branches and conventional commits; GitLab CI with 132 pytest files as the merge gate on the voice-agent platform.
