Harish G

Python Developer | FastAPI, Celery, asyncio, pytest

Bengaluru, India | +91 7892855850 | harishgreddy.work@gmail.com | LinkedIn | GitHub | harishg.com

Profile

Most of what I write is Python that has to stay up. Async services streaming audio both ways over a socket, Celery workers doing the things that must not happen inside a request, and migrations that let a schema move while the service is still serving. Once I replaced a live platform's Node backend with FastAPI and swapped its speech provider underneath it. Nobody's survey dropped.

Core Skills

Languages	Python · JavaScript · TypeScript · Java · SQL
Backend	FastAPI · asyncio · WebSockets · Celery · Flask · Alembic · REST API Design
Data	PostgreSQL · MongoDB · Redis · pgvector · LightGBM · Prophet · scikit-learn · Streamlit
AI / LLM	LLM Integration · RAG · Agents & Tool Calling · Output Guardrails · Gemini Live · Whisper · Ollama
Testing	pytest · GitLab CI · Jenkins · GitHub Actions · Docker & Compose
Concepts	System Design · Modular Architecture · JWT Auth & RBAC · Multi-Tenant SaaS · Query Optimization

Experience

Software Developer, CortexCraft.ai Jan 2026 – Present

- Built and maintain the voice-agent platform (589 of 626 commits on the SaaS platform, 67 of 75 on the core engine) in Python: FastAPI services, asyncio tasks streaming audio both ways over WebSockets, and an external REST API other products call.
- Shipped LeadCall AI on that platform: Celery dial and callback workers, Alembic-migrated PostgreSQL, Excel lead import and per-tenant credentials encrypted at rest.
- Lead author (172 of 192 commits) on the multilingual survey platform. Replaced its Node.js backend with FastAPI and swapped the speech provider behind a config-driven registry of 24 locales, both without interrupting live surveys.
- Gate merges on GitLab CI with 132 pytest files, on feature branches with conventional commits.

Freelance Web & App Developer (Self-Employed) 2023 – 2026

- Delivered Python and Node.js services, automation scripts and React front ends end to end for local clients.

Selected Projects

KisanVoice AI *Python, FastAPI, MongoDB, WhatsApp Flows, Google STT/TTS, Jenkins, Docker*

- 172 of 192 commits. Voice surveys in 24 configured locales (10 Indian) from a JSON-plus-database language registry merged into one alias index, so adding a language is a config row rather than a deploy.
- Option matching survives imperfect speech through fuzzy and semantic fallback; long option sets go out as paginated WhatsApp Flows instead of unusable text menus.

Inventory & Sales Prediction *Python, LightGBM, FastAPI, PostgreSQL, Docker*

- Sole author. Three quantile LightGBM models per product-store-day over lag features at 1, 2, 3, 7, 14 and 28 days, with joblib persistence, a model loader that hot-reloads without a restart, a retrain entry point and FastAPI serving in Docker.

JiraFlow Agent *Python, React, Vite, Jira API, GitHub API*

- Reads a Jira ticket, locates the files it describes, applies the change and opens a pull request from a dedicated `ai/scrum-<id>` branch whose commit cites the ticket. The agent proposes and a human merges, so it never pushes to main.

Zentrax *Python, Whisper, MediaPipe, Ollama, WebSocket, Docker*

- 12 of 16 commits. Privacy-first desktop assistant running its LLM locally through Ollama with Whisper for on-device speech recognition and MediaPipe gesture control, monitored over a real-time WebSocket dashboard.

Education & Ways of Working

B.E., Information Science and Engineering, Vivekananda Institute of Technology, Bangalore

Feature branches and conventional commits; GitLab CI with 132 pytest files as the merge gate on the voice-agent platform.
