Profile

Software Developer at CortexCraft.ai building production AI systems: real-time Gemini Live voice agents over telephony, tool-calling orchestration, RAG pipelines, and multi-tenant backends in FastAPI, Node.js and Spring Boot. I keep models constrained: tools go through declared functions, and extracted call data is coerced to its declared type before anything downstream trusts it.

Core Strengths

Languages: Python, JavaScript, TypeScript, Java, Kotlin, SQL
AI/ML: LLM Integration, RAG, Agents & Tool Calling, Output Guardrails, Context Management, Gemini Live, STT/TTS Pipelines, LightGBM/Prophet
Backend: FastAPI, Node.js/Express, Spring Boot, Celery, Alembic, WebSockets, REST API Design
Frontend/Mobile: React, Vite, Tailwind CSS, Jetpack Compose (Kotlin, Firebase)
Data: PostgreSQL, MongoDB, Neo4j, Supabase/pgvector, Redis, Firebase
Platform: Twilio, Plivo, WhatsApp Business API, Docker & Compose, CI/CD, Git/GitLab
Concepts: System Design, Modular Architecture, JWT Auth & RBAC, Query Optimization, Multi-Tenant SaaS

Experience

Software Developer, CortexCraft.ai Jan 2026 – Present

- Built and maintain the voice-agent platform (589 of 626 commits, plus 67 of 75 on the core engine): Gemini Live phone agents over Twilio and Plivo, with per-agent RAG grounding, prompt generation, transcripts, and an external REST API that other products call instead of forking the stack.
- Shipped LeadCall AI on that platform: a multi-tenant outbound-calling SaaS with Celery dial and callback workers, pitch-document RAG and Excel lead import (FastAPI, Alembic/PostgreSQL, React).
- Own production reliability of the call pipeline: fixed outbound routing, added reconnect handling for dropped Gemini sockets, and traced a Docker TLS failure to NAT hairpinning. Also design the prompt frameworks, guardrails and tool-calling orchestration that constrain model output.

Freelance Web & App Developer (Self-Employed) 2023 – 2026

- Delivered full-stack web and app projects end-to-end for local clients: React/Vite front ends, Python/Node.js services and automation scripts, plus ongoing fixes and deployment support.

Projects

KisanVoice AI: Multilingual WhatsApp Voice Survey Platform *Python, FastAPI, React, MongoDB, WhatsApp Flows, Google STT/TTS, Plivo, Jenkins, Docker*

- Voice and text surveys in 24 configured locales (10 Indian) from a config-driven language registry, so adding one is a config row rather than a deploy; WhatsApp Flows for long option sets.
- Migrated the platform off its Node backend onto FastAPI and off Sarvam onto Google STT/TTS without interrupting live surveys; Jenkins CI, Docker Compose. 172 of 192 commits authored.

FinGraph AI: Hybrid Graph and Vector RAG Banking Assistant *Node.js, React, Neo4j, pgvector, Groq, JWT*

- Fused pgvector semantic search (MiniLM embeddings) with Neo4j: every match is enriched with its graph relationships, such as a loan's borrower, before Groq writes the answer.
- JWT authentication with bcrypt-hashed passwords, and ADMIN-only admin and audit APIs.

Sales & Inventory Forecasting: ML Decision Support *Python, FastAPI, LightGBM, Prophet, PostgreSQL, React, Streamlit, Docker*

- Item-level demand forecasting (LightGBM, Prophet) behind a FastAPI service, turned into policy: safety stock, reorder points, EOQ and ABC classification, with interactive dashboards.

Education & Ways of Working

B.E., Information Science and Engineering, Vivekananda Institute of Technology, Bangalore
Feature branches and conventional commits; GitLab CI with 132 pytest files as the merge gate on the voice-agent platform.
