Harish G

Full-Stack Developer | React · FastAPI · Spring Boot · PostgreSQL

Bengaluru, India | +91 7892855850 | harishgreddy.work@gmail.com | LinkedIn | GitHub | harishg.com

Profile

I like owning a feature end to end. That means settling the REST contract before either end exists, because deciding it late is how a front end ends up shaped like the database underneath it, and I have had to unpick that more than once. Two ecosystems, same habit: React against FastAPI and Express, React against Spring Boot.

Core Skills

Languages	Python · JavaScript · TypeScript · Java 21 · Kotlin · SQL
Frontend	React · Vite · Tailwind CSS · NextUI · Socket.io · Jetpack Compose
Backend	FastAPI · Node.js/Express · Spring Boot 3.5 · Celery · Alembic · Flyway · WebSockets · REST API Design
Data	PostgreSQL · MongoDB · Neo4j · Supabase/pgvector · Redis · Firebase
Platform	Docker & Compose · GitHub Actions · GitLab CI · Jenkins · Git
Concepts	System Design · Modular Architecture · DTO-Based Architecture · JWT Auth & RBAC · Multi-Tenant SaaS · Query Optimization

Experience

Software Developer, CortexCraft.ai Jan 2026 – Present

- Built and maintain the voice-agent platform (589 of 626 commits on the SaaS platform, 67 of 75 on the core engine): FastAPI services, a React dashboard for configuring agents, and an external REST API that other products call instead of forking the stack.
- Shipped LeadCall AI on that platform, both halves of it. React dashboard, FastAPI backend, Celery dial and callback workers, Excel lead import and Alembic-migrated PostgreSQL.
- Own production reliability across the stack. Fixed outbound routing, added reconnect handling for dropped sockets, and traced a Docker TLS failure to NAT hairpinning.
- Lead author (172 of 192 commits) on the multilingual survey platform, including the React admin dashboard and the FastAPI backend that replaced its Node.js one.

Freelance Web & App Developer (Self-Employed) 2023 – 2026

- Delivered web and app projects for local clients, front end and back: React/Vite front ends, Python and Node.js services, plus ongoing fixes and deployment support.

Selected Projects

KisanVoice AI *Python, FastAPI, React, MongoDB, Socket.io, Google STT/TTS, Jenkins, Docker*

- 172 of 192 commits. WhatsApp survey platform: FastAPI backend, MongoDB storage, and a React admin dashboard with an audio QC workflow and Excel export that receives live call events over Socket.io.
- Migrated the platform off its Node.js backend onto FastAPI and off Sarvam onto Google STT/TTS without interrupting live surveys; 24 locales come from a config-driven registry, so adding one is a config row rather than a deploy.

FinGraph AI *Node.js, Express, React, Neo4j, Supabase pgvector, Groq, JWT*

- Banking assistant fusing pgvector similarity search over MiniLM embeddings with Neo4j, so every match is enriched with its graph relationships before the answer is generated.
- Express API behind a React chat client, with JWT authentication over bcrypt-hashed credentials and ADMIN-only admin and audit routes.

Lendly, lending platform *Java 21, Spring Boot 3.5, React, PostgreSQL, Flyway, Docker*

- Spring Boot 3.5 on Java 21 with Spring Security and JJWT, Data JPA and Bean Validation, Flyway migrations against PostgreSQL with H2 for tests, a React front end, GitHub Actions CI and Docker Compose for local environments.

StockSense AI *Python, FastAPI, LightGBM, Prophet, PostgreSQL, React, Streamlit*

- Item-level demand forecasting behind a FastAPI service, turned into stocking policy (safety stock, reorder points, EOQ and ABC classes) and explored through React and Streamlit dashboards.

Education & Ways of Working

B.E., Information Science and Engineering, Vivekananda Institute of Technology, Bangalore

Feature branches and conventional commits; GitLab CI with 132 pytest files as the merge gate on the voice-agent platform.
