Harish G

Android Developer | Kotlin, Jetpack Compose, Room, Hilt | and the APIs behind the app

Bengaluru, India | +91 7892855850 | harishgreddy.work@gmail.com | LinkedIn | GitHub | harishg.com

Profile

I build Android apps and the services behind them. That makes me the one who notices when the API contract and the screen disagree. My largest Compose codebase runs to 34 Gradle modules and 199 test files, and the calculation engines are pure Kotlin, so they test without an emulator. The backend half is streaming. It is the same reconnect problem a phone on a bad network has.

Core Skills

Mobile	Kotlin · Jetpack Compose · MVVM · Hilt · Room / SQLCipher · ML Kit OCR · Firebase Auth & Realtime DB · Gradle Modules · Android Studio
Languages	Kotlin · Java · Python · TypeScript · JavaScript · SQL
Backend	FastAPI · Spring Boot · Node.js/Express · REST API Design · WebSockets · Celery
Data	Room / SQLite · Firebase · PostgreSQL · MongoDB · Redis
Testing	JVM unit tests · pytest · GitHub Actions · GitLab CI · Docker & Compose
Concepts	Modular Architecture · One-Way Module Graph · On-Device Processing · JWT Auth & RBAC · System Design

Experience

Software Developer, CortexCraft.ai Jan 2026 – Present

- Built and maintain the voice-agent platform (589 of 626 commits on the SaaS platform, 67 of 75 on the core engine): real-time audio streaming over WebSockets, and an external REST API that client applications drive calls through.
- Own production reliability of that pipeline: fixed outbound routing, added reconnect handling for dropped sockets, and traced a Docker TLS failure to NAT hairpinning. Reconnect behaviour on a flaky network is the same problem a mobile client has.
- Shipped LeadCall AI on the platform: multi-tenant outbound calling with Celery workers, Alembic-migrated PostgreSQL and a React dashboard.

Freelance Web & App Developer (Self-Employed) 2023 – 2026

- Delivered web and app projects end to end for local clients, including Android work, React front ends and the services behind them.

Selected Projects

AI Personal CFO and Talo *Kotlin, Jetpack Compose, Hilt, Room/SQLCipher, ML Kit, Gemini Live*

- Sole author, 159 commits, 34 Gradle modules, 199 test files. A one-way module graph keeps feature modules independent of each other, and the calculation engines are pure Kotlin with no Android imports, so they are testable without an emulator.
- Compose UI over immutable state, Hilt constructor injection throughout, and Room on SQLCipher with the database key held in the Android Keystore. On-device ML Kit OCR extracts receipt fields, and the SMS parser is built to refuse, resolving every ambiguous case to null.
- Twelve deterministic engines compute every figure and the model is only permitted to explain them; an output guardrail rewrites any number absent from the tool result as `[unverified]`.

GroceryGo *Kotlin, Jetpack Compose, Firebase*

- 4 of 4 commits. Android grocery-list app with a Jetpack Compose UI and ViewModel-held screen state on an MVVM structure, backed by Firebase Authentication and Realtime Database.
- Final project of my Internshala Android development training, and where I learned MVVM on Android.

KisanVoice AI *Python, FastAPI, React, MongoDB, WhatsApp Flows, Google STT/TTS*

- 172 of 192 commits. Mobile-first survey platform reaching users through WhatsApp rather than an installed app: voice answers in 24 configured locales (10 Indian), with WhatsApp Flows standing in for long option sets that would be unusable as a text menu.

Education & Ways of Working

B.E., Information Science and Engineering, Vivekananda Institute of Technology, Bangalore

Feature branches and conventional commits; GitLab CI with 132 pytest files as the merge gate on the voice-agent platform.
